

through the water to produce concrete ...

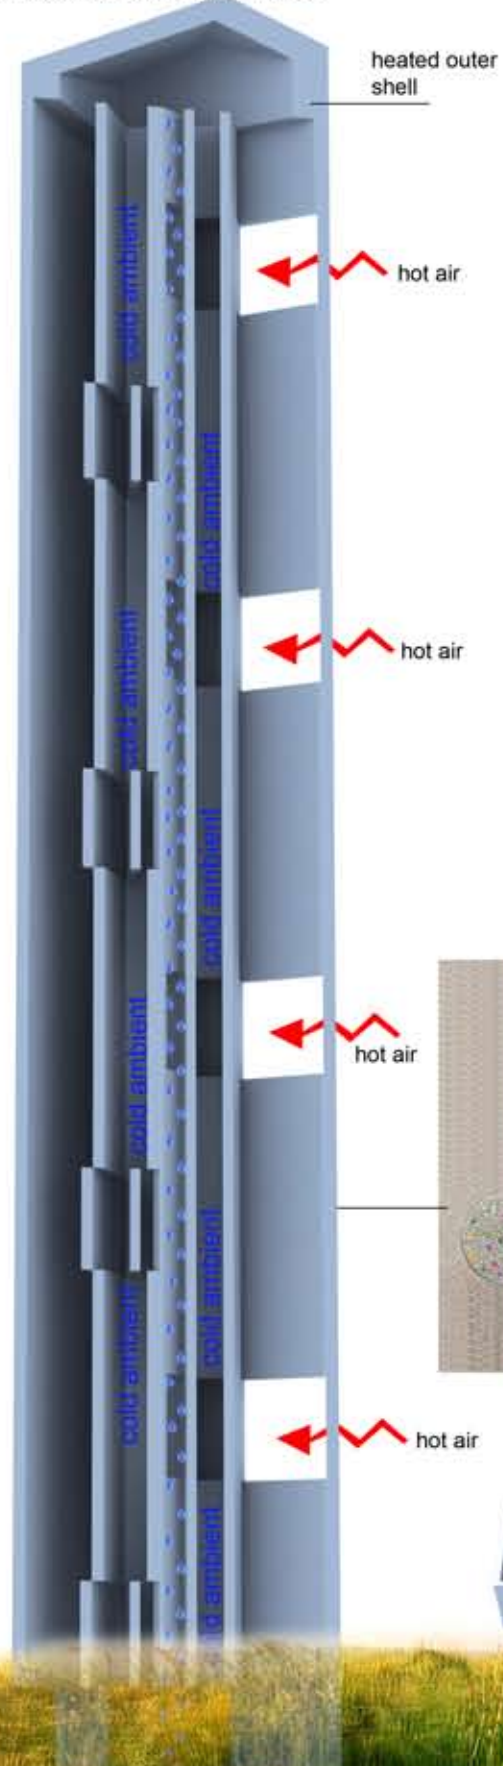

Water vapor in the air near the earth takes the form of concentrates and a small water droplets. This is a very small water droplets remain suspended in the air. Astronomy Picture of the layer (fog) or 1% of moisture in the air into the water to be provided with concrete?

The concrete mass and volume, create an environment for vertical condensation of water has been reorganized? Spiral concrete to create a structure and may make their environments constantly search for the temperature difference in this structure.

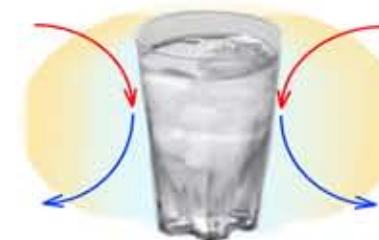

Thus, the condensed water droplets producing this structure is aimed to create a greener environment.

temporary water bar section

The concrete mass and volume, create an environment for vertical condensation of water has been reorganized?

Spiral concrete to create a structure and may make their environments constantly search for the temperature difference in this structure.
