

SUNKEN concrete decorations

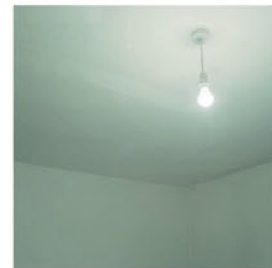

Because of the way our houses are built nowadays, decorations have dissapeared. By using pre-fabricated concrete parts its possible to built much faster and much more efficient, but without decorations our houses remain empty.

The aim of the Sunken project is to intergrate decorations into the process of casting pre-fab concrete.

By pushing back the decorations into the wall, sink them, its possible to intergrate decorations in the pre-fab production process. The decorations are pushed back underneath the top surface of the concrete, making it possible to stack and transport the pre-fab parts in the usual manner. Because the decorations are sunken, they can be intergrated on every desired location, without needing a new mould for every new position.

This project: is about bringing back decorations into our home environment.

Concept: Sunken The idea is to re-intergrate decorations in our homes.

Material: Pre-fabricate concrete is the building material of the future.

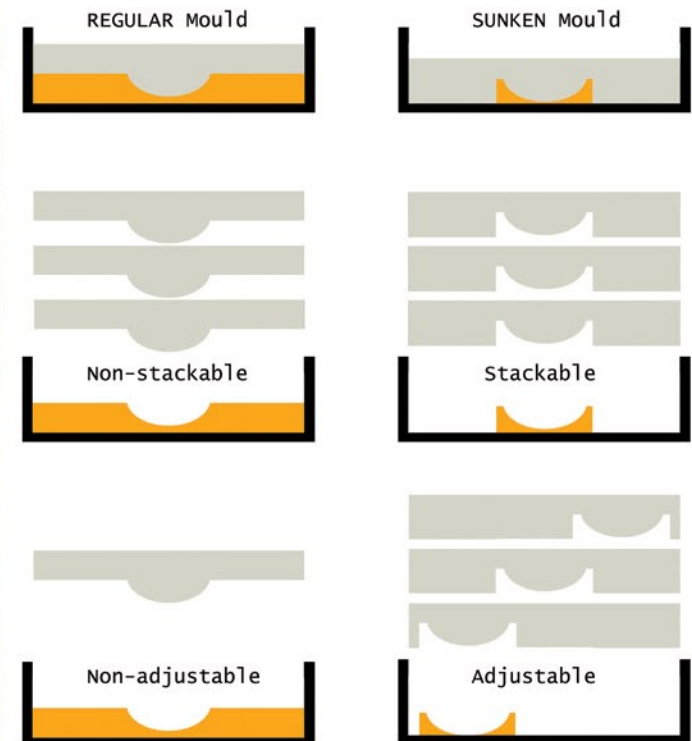

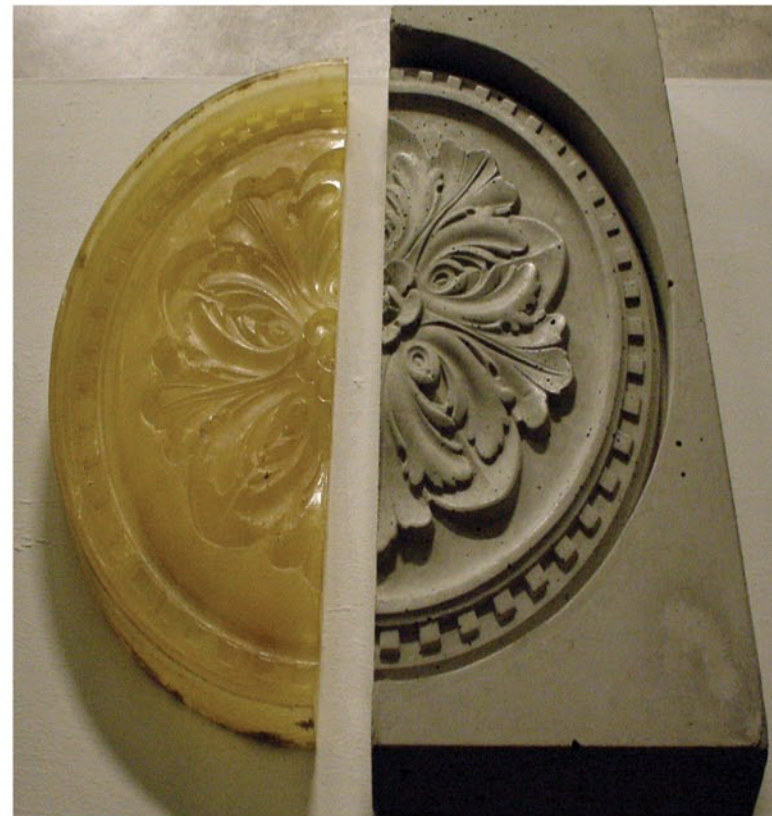

Target group: Building projects like VINEX. Or other new housing projects.

Result: Pre-fab parts with intergrated decorations.
