

# NEGATIVE MONOLITHOSPHERE

the two concepts,  
negative space and monolithness  
are incorporated to form this project  
which features  
a giant translucent concrete monolith  
floating in a giant void  
carved out of the lithosphere and filled with water,  
molded to have an inner cavity  
which serves both to decrease the density  
thus make it possible to float,  
and to illuminate the block from  
inside to make it shine and be totally seen  
from the surface.
